

SR18AJ/SR18A **SR21AJ/SR21A**

Both these robust AICHI telescopic working platforms can be used for heights of up to 20 m or 23 m, respectively.

The horizontal/vertical steering and control system affords synchronous horizontal and vertical movements during work with just one joystick.

The crawler wheel running gear can negotiate the most difficult off-road conditions, but can also be employed on sensitive surfaces with the non-marking rubber pads that are optionally available.

The very stable elements of the 3-part telescopic arm rest on rollers. The travelling, hoisting and swiveling speed are continuously monitored with the help of the integrated smooth system and automatically adjusted, if necessary.

The full warranty period for the equipment of the SR series is 12 month throughout, with another 48 months on top of it for the steel structure.

AICHI equipment is extremely reliable. The high-quality products have been designed for daily use in the most difficult conditions.
